

College of Engineering

- **Master of Science in Systems & Process Control Engineering**
- **Master of Science in Electrical Engineering**
- **Master of Science in Computer Engineering**
- **Master of Science in Civil Engineering**
- **Master of Science in Mechanical Engineering**
- **Master of Science in Chemical Engineering**
- **Doctor of Philosophy in Chemical Engineering**
- **Master of Science in Petroleum Engineering**
- **Doctor of Science in Petroleum Engineering**
- **Master of Science in Industrial & Management System Engineering**

ENGINEERING (CORE COURSES)

INTRODUCTION

Engineering graduate programs require the study of some of the following general (core) graduate engineering courses.

0600-503	Statistical Concepts in Engineering	(3)
0600-504	Numerical Analysis and Computation	(3)
0600-505	Finite Element Methods	(3)
0600-506	Continuum Mechanics	(3)
0600-507	Mathematical Optimization	(3)
0600-508	Random Variables and Stochastic Processes	(3)
0600-510	Advanced Fluid Mechanics	(3)
0600-511	Computational Fluid Dynamics	(3)
0600-512	Advanced Engineering Mathematics I	(3)
0600-513	Advanced Engineering Mathematics II	(3)

COURSE DESCRIPTION

**0600-503: STATISTICAL CONCEPTS IN ENGINEERING
CR: 3**

Elements of probability theory, random variables, analytical models of random phenomena, reliability, factor of safety, safety margin, extreme value statistics, Monte-Carlo simulation, empirical determination of distribution models, confidence intervals, regression and correlation analysis, general applications to engineering design problems, stochastic processes.

**0600-504: NUMERICAL ANALYSIS AND COMPUTATION
CR: 3**

Norms, limits and condition numbers. Inverses of perturbed matrices. Integrative techniques for solving systems of equations. The LU, QR and singular value decompositions. Algorithms for the linear least squares and linear minimax problems. Computation of the eigenvalues of a matrix. the interpolation and polynomial approximation. Approximate methods for initial value problems and for boundary value problems.

**0600-505: FINITE ELEMENT METHODS
CR: 3**

Origin and basis of finite-element methods in continuum mechanics, stiffness method, assumed displacement field, potential energy and Rayleigh-Ritz method, types of elements, modeling, accuracy and convergence, solution techniques and computer application to structural and fluid mechanics.

**0600-506: CONTINUUM MECHANICS
CR: 3**

Cartesian tensors. Basic principles of continuum mechanics: deformation, displacement, strain, stress, conservation of mass, continuum thermodynamics and constitutive equations. Illustrative applications in elasticity, fluid dynamics, viscoelasticity ad plasticity.

**0600-507: MATHEMATICAL OPTIMIZATION
CR: 3**

Basic Concepts: The gradient vector and the Hessian Matrix, multidimensional Taylor's theorem, linear and quadratic approximation of a function. Unconstrained optimization, necessary

and sufficient conditions for optimality. Algorithms for single variable minimization, the Fibonacci search and the Golden section search, algorithms that use repeated polynomial interpolation. Algorithms for multi-dimensional minimization; The steepest descent, the Newton method and its variations, conjugate gradient algorithms such as the Fletcher-Reeves, Polak and Ribiere, Quasi-Newton Methods such as the DEP-BFGS, Huang's family of algorithms. Constrained optimization: Necessary and sufficient conditions for constrained minima. Algorithms for constrained optimization: interior and exterior penalty function methods, augmented Lagrangian methods, Resen's gradient projection.

0600-508: RANDOM VARIABLES AND STOCHASTIC PROCESSES
CR: 3

Introduction to probability theory and engineering applications of probability. random variables and expected values. distribution of functions of random variables and applications of R.V. to system problems. Stochastic processes, correlation and power spectra, systems and random signals. Engineering decisions and estimation theories.

0600-510: ADVANCE FLUID MECHANICS
CR: 3

Motion of ideal, Newtonian, and non-Newtonian single-phase fluids. Continuity and Navier-Stokes equations for one and two dimensional flows. Turbulence and boundary layer theories. Flow through conduits, and porous medium. Homogenous and non-homogenous multiphase flow systems.

600-511: COMPUTATIONAL FLUID DYNAMICS
CR: 3

This course introduces students to the numerical and computational fluid dynamics. It will provide graduate students (Science and Engineering students) with techniques and approaches to solve numerical fluid mechanics problems encountered in real fluid flows. Methods for boundary layers, incompressible viscous flows, and inviscid compressible flows are studied. Finite differences and finite volume techniques are emphasized. The course utilizes using commercial CFD packages and MATLAB to solve fluid flow problems.

0600-512: ADVANCED ENGINEERING MATHEMATICS I
CR:3

Analytic function, residues, contour integration. Power series solutions of ordinary differential equations: Bessel's, Legendre's, Chebysheve's and Laguerre's functions. Matrix algebra eigenvalues, eigen-functions, and solutions of systems of differential equations. Software applications.

0600-513: ADVANCED ENGINEERING MATHEMATICS II
CR:3

Sturm-Liouville problem. Partial differential equations: Characteristic curves, separation of variables and integral transforms (Laplace and Fourier), method of characteristics. Wave, heat and diffusion-equations. Software applications.

Master of Science in Mechanical Engineering
Program code: 063010

INTRODUCTION

The Department of Mechanical Engineering offers a Master of Science Program in **Mechanical Engineering**. Research requirements include either thesis or non-thesis options. The program is a balanced combination of the theoretical and practical aspects of mechanical engineering with enough flexibility to allow for interaction with the ever developing sciences and technologies and with the changing needs of the region.

The program is designed to deepen and broaden the scientific and engineering skills in one of the following two lines:

- Mechanical Design and Manufacturing
- Thermo-Fluid Engineering

The general research interests in the department are focused in these two lines. They include works in mechanical vibration, dynamics and control, stress analysis, tribology, computer-aided design, robotics, computer-aided manufacturing, mechanical behavior of materials, composite materials, corrosion, thermodynamics, heat transfer, experimental and computational fluid mechanics, energy management, combustion and combustion engines, solar energy, heating and air-conditioning systems, desalination, aerodynamics, turbulence, and dual-purpose power plants.

According to the University Council decision dated 4/2/2007, Thesis students admitted with effect from September 2007 are exempted from the comprehensive examination.

PROGRAM REQUIREMENTS

33(33) TOTAL COURSE CREDITS (non-thesis option in parenthesis)

3 (3) CORE COURSES (3 credits each)

- 0600-505 Finite Element Methods
- 0600-506 Continuum Mechanics
- 0600-507 Mathematical Optimization
- 0600-508 Random Variables and Stochastic Processes
- 0600-513 Advanced Engineering Mathematics II

9 (9) SUBDISCIPLINE COURSES(3 credits each)

Student can select 9 credits from any of the following two sub-disciplines.

I. MECHANICAL DESIGN AND MANUFACTURING

- 0630-509 Analytical Mechanics
- 0630-511 Stress Analysis in Mechanical Design
- 0630-512 Mechanical Vibrations
- 0630-513 Dynamic Analysis and Design of Machines

- 0630-514 Computer-Aided Design
- 0630-515 Engineering Materials: Selection and Applications
- 0630-516 Reliability and Maintainability
- 0630-517 Optimal Design
- 0630-519 Stability of Structures and Systems
- 0630-534 Modeling Dynamic Systems
OR 0670-515 Modeling Dynamic Systems
- 0630-542 Computer Integrated Manufacturing
- 0630-543 Fracture Mechanics
- 0630-554 Special Topics in Mechanical Design

II. THERMO-FLUID ENGINEERING

- 0630-520 Advanced Conduction Heat Transfer
- 0630-522 Radiation Heat Transfer
- 0630-523 Advanced Convection Heat Transfer
- 0630-524 Air-Conditioning
- 0630-525 Non-Conventional Energy Conversion Systems
- 0630-527 Power Plants
- 0630-528 Heat Exchangers Design
- 0630-529 Refrigeration Engineering
- 0630-531 Fluid Mechanics **OR** 0600-510 Advanced Fluid Mechanics
- 0630-532 Gas Dynamics
- 0630-533 Computational Fluid Mechanics
OR 0600-511 Computational Fluid Dynamics
- 0630-535 Mechanical Aspects of Desalting Systems
- 0630-538 Special Topics in Thermo-Fluid Engineering
- 0630-539 Advanced Thermodynamics

9(15) FREE ELECTIVE COURSES

A maximum of 3 credits hours (thesis students) and 6 credits hours (project students) of graduate courses can be taken from:

- Area of Engineering (Core and elective)
- Area of Science
- Area of Joint Graduate Programs (Engineering/Science Specialization)

with the approval of the graduate program director before registering for the course.

12 (6) COMPULSORY COURSES

0600-512	Advanced Engineering Mathematics I
0630-592	Seminar (0)
0630-593	Project (3) (non-thesis option only)
0630-597	Thesis (0)
0630-598	Thesis (0)
2000-599	Thesis (9)

COURSE DESCRIPTION**0630-509: ANALYTICAL MECHANICS
CR: 3**

Review of Newtonian mechanics. The principle of virtual work. D'Alembert's principle. Hamilton's principle. Lagrange's equations of motion. Case of impulsive forces. Conservation laws. Rayleigh's dissipation function. Hamilton's equations. Motion relative to rotating frames. Rigid body dynamics. Gyroscopic effects. Canonical transformations. The Hamilton-Jacobi equation.

**0630-511: STRESS ANALYSIS IN
MECHANICAL DESIGN
CR: 3**

Stress and strain in two and three dimensions. Plane theory of elasticity. Failure theories. Stress concentration. Residual Stresses. Thermal stresses. Contact stresses. Impact loading. Fracture mechanics and design. Fatigue and cumulative damage. Structural instability. Experimental stress analysis. Energy approach and numerical methods. Case Studies.

**0630-512: MECHANICAL VIBRATIONS
CR: 3**

Lagrange's equations. Response of multi-degree-of-freedom systems. Vibration of continuous systems. Approximate solutions. Introduction to nonlinear vibrations. Introduction to random vibrations. Spectral analysis.

**0630-513: DYNAMIC ANALYSIS AND
DESIGN OF MACHINES
CR: 3**

General concepts in the dynamic analysis and design of machines, with reference to machine tools. Structure compliance, integrity, static and thermal deformations, structure design concepts.

Drive systems, slides and bearings. Feed drives. Types of control systems; numerical, adaptive and computer control. Steady and dynamic cutting forces. Dynamics of machine tools. Receptance concept. Interaction between cutting and structural response. Machine tool stability. Vibration reduction of machine tools in the design stage and in the field. Design for fabrication by bonding.

**0630-514: COMPUTER-AIDED DESIGN
CR: 3**

Computer Graphics including solid modeling and image synthesis, curve and surface description, 3-D transformations. Use of prepackaged software. Review of optimization techniques: linear, non-linear and dynamic programming. Design applications in mechanical engineering systems.

**0630-515: ENGINEERING MATERIALS:
SELECTION AND APPLICATIONS
CR: 3**

Mechanical behavior of materials: elastic and plastic behavior, yielding fracture, crack propagation, fatigue, creep. Behavior at low and high temperatures. Engineering properties of metallic and non-metallic materials. Functional requirements of engineering materials. Material selection process, criteria and techniques. Aspects of design for selection. Applications: material selection for springs, fasteners, gears, bearings etc. Material selection for abrasive-wear and corrosion-resistance applications. Case studies.

**0630-516: RELIABILITY AND
MAINTAINABILITY
CR: 3**

Component factors in durability and reliability. Reliability concepts and assessments. The performance requirements. Static and dynamic

reliability models. Random variables in design. Sampling estimation and confidence. Maintainability down-time and repair-time. Design factors determining down-time. Maintainability prediction. Maintainability and reliability in contracts. Maintenance handbook.

**0630-517: OPTIMAL DESIGN
CR: 3**

Survey of single-variable unconstrained optimization methods. Multi-variable unconstrained optimization. Single and multi-variable constrained optimization techniques. Applications from mechanical design, vibrations, solid mechanics, and thermal fluid systems.

**0630-519: STABILITY OF STRUCTURES
AND SYSTEMS
CR: 3**

Concept of stability. Lejeune-Dirichlet criterion. Nyquist criterion. Routh and Hurwitz criterion. Liapunov second method. Examples from rigid body dynamics. Effects of damping. Gyroscopic effects. Elastic stability under static load: Beam-columns, bars and frames, torsional buckling, buckling of rings, curved bars and arches. Dynamic instability: Divergence and flutter. Instability under nonconservative forces. Examples.

**0630-520: ADVANCED CONDUCTION
HEAT TRANSFER
CR: 3**

A generalized treatment of the solution of steady and transient heat conduction in finite and infinite regions. Approximate and exact methods of solution of problems involving phase change, variable thermal properties, heat generation, and non-linear boundary conditions. Heat conduction in composite media and in anisotropic solids.

**0630-522: RADIATION HEAT TRANSFER
CR: 3**

Exact and approximate methods of solution of radiative heat transfer. Heat radiation of black bodies and non black bodies. Radiation between surfaces and through participating and non-participating media. Experimental methods. Radiation heat processes. Radiative properties of surfaces and gases. Multimode heat transfer in thermal systems. Numerical modeling.

**0630-523: ADVANCED CONVECTION
HEAT TRANSFER
CR: 3**

Differential forms of the balance laws of mass, linear momentum, and energy, Boundary layer theory, Scale Analysis, Similarity solutions, Forced and free convection in laminar and turbulent, internal and external flows. Analogy between momentum and heat transfer. Heat and mass transfer in compressible flow.

**0630-524: AIR-CONDITIONING
CR: 3**

Air-Conditioning systems and their psychrometric process, analysis and performance of direct contact heat and mass transfer exchanges: cooling towers, analysis of extended surface heat exchangers, analysis of cooling coils, air conditioning control.

**0630-525: NON-CONVENTIONAL
ENERGY CONVERSION SYSTEMS
CR: 3**

Analysis and performance characteristics based on thermodynamics and fluid flow of non-conventional energy conversion systems.

**0630-527: POWER PLANTS
CR: 3**

Thermodynamics review, Availability, Irreversibility, Entropy creation efficiency and effectiveness. Rankine cycle: Ideal and real cycle, effects of superheating, reheating, feed water heat regeneration, condenser. Fossil-fuel steam generations: water tube boilers, design of natural and forced flow, furnace design with tube walls, evaporators, superheaters, economizers, fans, stacks. Rating of steam generators. Fuels and combustion. Steam turbines: Impulse and reaction turbines, analysis and sizing. Turbine rating methods, turbine losses, gas turbines cycles (simple open, regenerative and cooled), Combined cycle, rating of gas and gas/steam cycles. Condensate-feed water system: Condensers types and designs, feed water heaters types and designs, deaerators, make up water. Circulating water systems.

**0630-528: HEAT EXCHANGERS DESIGN
CR: 3**

Double-pipe heat exchangers. Shell and tube heat exchanger. Flow arrangements for increased heat recovery in shell and tube exchangers. Gases cooling and heating. Extended surfaces. Condensation of vapors and condensers design.

Evaporation and evaporators. Steam generator design: Furnaces, superheaters, economizers, evaporators, cooling towers.

**0630-529: REFRIGERATION ENGINEERING
CR: 3**

Machinery for vapor compression systems: Compressors (reciprocating, rotary positive displacement and turbo), condensing equipment, evaporators, expansion valves, cooling towers. Equipment design, characteristic and rating methods, equipment matching. Multistage vapor compression systems. Ammonia absorption refrigeration system design and characteristics. Lithium bromide-water absorption system design and characteristics. Steam jet regeneration systems design. Cold storage. Defrosting methods.

**0630-531: FLUID MECHANICS
CR: 3**

Conservation laws and Navier-Stokes equations closed-form solutions of standard viscous flow problems. Boundary layer theory. Ideal-fluid flow equations, potential flow. Elementary flows.

**0630-532: GAS DYNAMICS
CR: 3**

Basic concepts of gas dynamics and gas properties. Subsonic flow. Supersonic flow. Hypersonic flow. Shock-wave phenomena. Dimensional analysis. Experimental techniques and other selected topics.

**0630-533: COMPUTATIONAL FLUID
MECHANICS
CR: 3**

Characteristics of different types of partial differential equations. Scalar representations of Navier-Stokes equations. Covariant and contravariant base vectors and calculus. Transformation of Navier-Stokes equations from physical space to computational space; Grid generation methods. Numerical methods for inviscid flows. Numerical methods for incompressible viscous flows.

**0630-534: MODELING DYNAMIC SYSTEMS
CR: 3**

Unified approach to modeling, analysis and simulation of energetic dynamic system. Introduction to multi-domain system. System dynamic response in time and frequency domains. Introduction to model reduction. Application to Various dynamic system such as mechanical,

thermal, fluid, electric, chemical, electromechanical system, emphasis on modeling and simulation of hybrid system using modern computer-aided tools.

**0630-535: MECHANICAL ASPECTS OF
DESALTING SYSTEMS
CR: 3**

Design of submerged and falling film evaporators. Single and multi-effect desalting systems and component design. Multi-stage flash (MSF) desalting system design. MSF components design (pumps, stages, brine heater, evacuating system,..). Mechanical vapor compression desalting system. Reverse osmosis desalting systems.

**0630-538: SPECIAL TOPICS IN THERMO-
FLUID ENGINEERING
CR: 3**

An upper division of graduate technical elective treating topics in mostly not covered in other courses, chosen at the discretion of the Graduate Program Committee.

**0630-539: ADVANCED THERMODYNAMICS
CR: 3**

Availability analysis. Irreversible Thermodynamics applied to engineering systems. Energy Analysis for power plants, refrigeration systems. Equilibrium and stability of thermodynamics system. General relations.

**0630-542: COMPUTER INTEGRATED
MANUFACTURING
CR: 3**

Fundamentals of manufacturing and automation, production systems (types, analysis, automation, simulation), numerical control production systems (NC, DNC, CNC, ACO, ACC) - industrial robotics (technology-programming, and application in manufacturing systems). Materials handling systems - flexible classification, coding machine cells, workstations, computer control). Control systems (feedback, optimal, sequence control). Computer integrated manufacturing (fundamentals of CAD/CAM computer planning of material process, and capacity) shop floor control and automation-order release, scheduling, identification systems. Computer network.

**0630-543: FRACTURE MECHANICS
CR: 3**

Stationary crack under static loading. Energy balance fracture mechanisms: Crack initiation and growth. Fracture modes. Stress intensity factors. Fracture toughness. Brittle and ductile fractures. Dynamic crack growth. Fatigue. crack propagation and component's life prediction. Experimental methods. Case studies.

**0630-554: SPECIAL TOPICS IN
MECHANICAL DESIGN
CR: 3**

An upper division of graduate technical elective treating topics in Engineering mostly not covered in other courses, chosen at the discretion of the Graduate Program Committee.

**0630-592: SEMINAR
CR: 0 CO-Requisites: 0630-593 Or 0630-597**

With the guidance of the graduate program committee, the seminar topics include:

- Research writing methods.
- Presentation skills
- Surveying literature.
- Bibliography style.
- New tools (LaTeX, Data analysis etc...)

**0630-593: PROJECT
CR: 3 CO-Requisites: 0630-592**

The student undertakes an independent project on a research topic of theoretical and/or experimental focus under the supervision of a faculty member listed in the supervisory list of the College of Graduate Studies. The objective is to provide the student with an opportunity to integrate and apply the knowledge gained throughout the course of study in a practical problem. The student must document the project in a scientific report following standard research writing guidelines and give a public presentation to the project examination committee.

**0630-597: THESIS
CR: 0 CO-Requisites: 0630-592**

**0630-598: THESIS
CR: 0**

**2000-599: THESIS
CR: 9**
