Master of Science in Statistics & Operations Research Program code: 048010

INTRODUCTION

The Department of Statistics and Operations Research (College of Science) offers a Master of Science program in **Statistics and Operations Research**. Research requirements include both thesis and non-thesis options. Current research interests of the faculty include: Non-Parametric Statistics, Linear Models, Stochastic Processes, Probability Theory, Distribution Theory, Multivariate analysis, Demography, Quality Control, Sampling, Simulation, Queuing Theory, Inventory Models, and Mathematical Programming.

According to the University Council decision dated 4/2/2007, Thesis students admitted with effect from September 2007 are exempted from the comprehensive examination.

PROGRAM REQUIREMENTS (non-thesis option in parenthesis)

31 (34) TOTAL COURSE CREDITS

1 (1) SEMINAR (1 credit each)

0480-529 Seminar in Statistics

0480-569 Seminar in Operations Research

12 (15) COMPULSORY (3 credits each)

0480-502	Theory of Statistics I

0480-524 Statistical Modeling

0480-549 Optimization

0480-550 Stochastic Processes

0480-585 Statistical Methods in Research

(for students outside the Statistical & Operation Program)

0480-593 Project (non-thesis option only).

6(12) ELECTIVES (3 credits each)

0480-501 Probability	Theory
----------------------	--------

0480-503 Theory of Statistics II

0480-504 Multivariate Statistical Analysis

0480-511 Bayesian Analysis

0480-512 Statistical Theory of Reliability

0480-513 Topics in Statistics

0480-515 Statistical Computing

COLLEGE OF SCIENCE

0480-521	Time Series Analysis
0480-522	Linear Statistical Models I
0480-523	Linear Statistical Models II
0480-551	General Systems Theory
0480-552	Optimization of Continuous System
0480-553	Optimization of Discrete Systems
0480-554	Queues and Inventories
0480-562	Operations Research Project
0480-563	Simulation
0480-565	Topics in Operations Research

3 (6) FREE ELECTIVES

The remaining credit hours may be elected from any 500 level graduate courses offered by the Program of Statistics and Operations Research or the Program of Mathematics with the approval of the Program Director.

9 COMPULSORY COURSES

0480-597	Thesis	(0)
0480-598	Thesis	(0)
2000-599	Thesis	(9)

COURSE DESCRIPTION

0480-501: PROBABILITY THEORY CR: 3

Measure-theoretic probability, random variables, univariate and multivariate distribution functions, expectation, characteristic functions, independence, the zero-one-law, the continuity theorem, modes of convergence. Sums of independent random variables, laws of large numbers, central limit theorems, conditional expectation.

0480-502: THEORY OF STATISTICS I CR: 3

Criteria and methods of estimation: minimum variance unbiased estimators, properties. General Procedures: Bayes estimation, minimax estimation, fiducial probability, principle of invariance estimation of parameters, maximum likelihood estimators, method of scoring, hypotheses testing, non parametric estimation.

0480-503: THEORY OF STATISTICS II CR: 3 PR: 0480-502

Asymptotic theory, Cramer-Rao type inequalities, asymptotic properties of maximum likelihood estimate, sequential analysis, estimation and hypothesis testing, decision theory and problem of identification.

0480-504: MULTIVARIATE STATISTICAL ANALYSIS CR: 3

The multivariate normal, inferences about mean and covarianced matrix, Wishart distribution, Hotelling T-square, multivariate analysis of variance, classification techniques, principal components, factor analysis.

0480- 507: FOUNDATIONS OF OPERATIONS RESEARCH CR: 3

(Pre 1989/1990 was offered as 0410-590) Operations research methodologies such as linear programming, integer programming, nonlinear programming, dynamic programing, networks, queueing and inventory, decision analysis, simulation, Markov chains. This course will not be counted for elective credits.

0480-508: FOUNDATIONS OF STATISTICS

CR: 3

Univariate and multivariate probability distributions, sampling distributions, maximum likelihood estimation, Rao-Cramer lower bound, efficient estimators, sufficiency, interval estimation, uniformly powerful tests, likelihood ratio tests, regression models. This course will not be counted for elective credits.

0480-511: BAYESIAN ANALYSIS CR: 3

Theories of probability: comparative, subjective, frequentist and quantitative probability. Decision theory: loss, utility and decision functions, no data problems. Distributions: prior, likelihood, posterior, fiducial and predictive. Methods of constructing prior distributions: personal, non-informative, Jeffry's prior, conjugate prior and maximum posterior distributions. Bayesian-statistical inference: point and interval estimation, testing, non-parametric procedures and analysis of contingency tables. Robustness of Bayes methods.

0480-512: STATISTICAL THEORY OF RELIABILITY

CR: 3

Structural properties of coherent Systems. Reliability of coherent systems. Parametric families of distributions of direct importance in reliability theory. Classes of life distributions based on notions of aging. Concepts helpful in the study of maintenance policies. Implementing coherent structure theory for complex systems.

0480-513: TOPICS IN STATISTICS CR: 3

Special topics not covered in other courses.

May be repeated for credit under different subtitles.

0480-515: STATISTICAL COMPUTING CR: 3

Techniques of advanced computational statistics, numerical optimization and integration, simulation and Monte Carlo methods including Markov chain Monte Carlo, bootstrapping, smoothing/density estimation, regression analysis, and other modern topics.

0480-521: TIME SERIES ANALYSIS CR: 3

Stationary and non-stationary models, autocovariance and auto correlation functions, spectral density, linear models, identification, estimation and forecasting, estimation of spectral densities, analysis of time series data.

0480-522: LINEAR STATISTICAL MODELS I CR: 3

Distribution of quadratic forms, non-central t, chisquare, non-normal cases, regression models, polynomial and trigonometric models.

0480-523: LINEAR STATISTICAL MODELS II CR: 3

Experimental design models, one-factor and two-factors, incomplete block models and tests for interaction, components-of-variance models.

0480-524: STATISTICAL MODELING CR: 3

Matrix preliminaries, normal linear models, multivariate normal, distributions of quadratic forms, full-rank and non-full-rank linear models, inference for categorized data, analysis of contingency tables, generalized linear models, logistic regression, logit models for multi-category responses, log-linear models, with applications using R.

0480-529: SEMINAR IN STATISTICS CR: 1

0480-549: OPTIMIZATION CR: 3

Unconstrained optimization, constrained optimization, Integer programming and stochastic programming.

0480-550: STOCHASTIC PROCESSES CR: 3

Markov chains, random walk, run problems, birth and death processes, Processes with independent increments, Poission and Gaussian Processes, applications, models in science, engineering and social sciences.

COLLEGE OF SCIENCE

0480-551: GENERAL SYSTEMS THEORY CR: 3

Definition and classification of systems, goal seeking behaviour and memory characteristics of systems, methods of systems description, interdependence analysis, entropic content of systems and the law of requisite variety and systems design and analysis.

0480-552: OPTIMIZATION OF CONTINUOUS SYSTEMS CR: 3

The optimization problem, the simplex method for linearizable models, duality in optimization, quadratic and convex mathematical programming, dynamic linear models, Markovian decision processes.

0480-553: OPTIMIZATION OF DISCRETE SYSTEMS CR: 3

Integer programming and combinatorial models, network models, dynamic programming and sequential analysis.

0480-554: QUEUES AND INVENTORIES CR: 3

Persuasiveness of waiting lines and inventories, structure and analysis of queues and inventories, optimal control of waiting lines and inventories.

0480-562: OPERATIONS RESEARCH PROJECT CR: 3

Phases of the operations research study. The student with the instructor identify a real-life significant problem and conduct on it a full operations research study.

0480-563: SIMULATION CR: 3

The need for computer simulation of processes, building a simulation model generating phenomena, design of simulation experiments, application of simulation, computer languages.

0480-565: TOPICS IN OPERATIONS RESEARCH CR: 3

Special topics not covered in other courses. May be repeated for credit under different subtitles. 0480-569: SEMINAR IN OPERATIONS

RESEARCH CR: 1

0480-585: STATISTICAL METHODS IN

RESEARCH CR: 3

1. Descriptive statistics,

- 2. Probability distribution,
- 3. Estimation,
- 4. Hypothesis testing,
- 5. Linear models covering "Regression models" and "Analysis of Variance models" (for standard experimental designs),
- 6. Generalized Linear Models,
- 7. Logistic regression,
- 8. Logit models.
- 9. Log-linear models,
- 10. Nonparametric methods,
- 11. Contingency tables,
- 12. Multivariate Analysis.

0480-593: PROJECT CR: 3

The student undertakes an independent project on a research topic of theoretical and/or experimental focus under the supervision of a faculty member listed in the supervisory list of the College of Graduate Studies. The objective is to provide the student with an opportunity to integrate and apply the knowledge gained throughout the course of study in a practical problem. The student must document the project in a scientific report following standard research writing guidelines and give a public presentation to the project examination committee.

0480-597: THESIS
